#### CONTENTS

1	Software Installation	1
2	Digital Filter	1
3	Difference Equation	2
4	Z-Transform	2
5	Impulse Response	3

#### 1 Software Installation

# Run the following commands

sudo apt-get update sudo apt-get install libffi-dev libsndfile1 python3 -scipy python3-numpy python3-matplotlib sudo pip install cffi pysoundfile

#### 2 Digital Filter

2.1 Download the sound file from

wget https://github.com/HARI-donk-EY/ sig\_pros/blob/main/codes/2/sound\_files/ Sound\_Noise.wav

- 2.2 You will find a spectrogram at https://academo.org/demos/spectrum-analyzer.Upload the sound file that you downloaded in Problem 2.1 in the spectrogram and play.
  - Observe the spectrogram. What do you find? **Solution:** There are a lot of yellow lines between 440 Hz to 5.1 KHz. These represent the synthesizer key tones. Also, the key strokes are audible along with background noise.
- 2.3 Write the python code for removal of out of band noise and execute the code.

**Solution:** 

```
import soundfile as sf
from scipy import signal
#read .wav file
input signal, fs = sf.read('sound files/
   Sound Noise.wav')
#sampling frequency of Input signal
sampl freq=fs
#order of the filter
order=4
#cutoff frquency 4kHz
cutoff freq=4000.0
#digital frequency
Wn=2*cutoff freq/sampl freq
# b and a are numerator and
   denominator polynomials respectively
b, a = signal.butter(order, Wn, 'low')
#filter the input signal with butterworth filter
output signal = signal.filtfilt(b, a,
   input signal)
\#output\ signal = signal.lfilter(b,\ a,\ input
   signal)
#write the output signal into .wav file
sf.write('sound files/
    Sound With ReducedNoise.wav',
```

output signal, fs)

# 4 Z-Transform

2.4 The output of the python script in Problem 2.3 is the audio file Sound With ReducedNoise.wav.

Play the file in the spectrogram in Problem 2.2. What do you observe?

**Solution:** The key strokes as well as background noise is subdued in the audio. Also, the signal is blank for frequencies above 5.1 kHz.

# 3 DIFFERENCE EQUATION

# 3.1 Let

$$x(n) = \left\{ \begin{array}{l} 1, 2, 3, 4, 2, 1 \\ 1 \end{array} \right\} \tag{3.1}$$

Sketch x(n).

#### 3.2 Let

$$y(n) + \frac{1}{2}y(n-1) = x(n) + x(n-2),$$
  
$$y(n) = 0, n < 0 \quad (3.2)$$

Sketch y(n).

**Solution:** The following code yields Fig. 3.2.

wget https://github.com/HARI-donk-EY/sig pros/blob/main/codes/3/xnyn.py

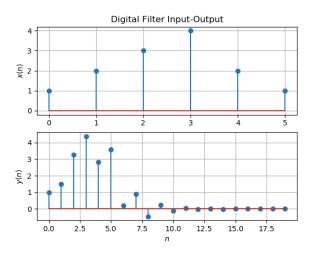

Fig. 3.2

# 4.1 The Z-transform of x(n) is defined as

$$X(z) = \mathcal{Z}\{x(n)\} = \sum_{n=-\infty}^{\infty} x(n)z^{-n}$$
 (4.1)

Show that

$$Z{x(n-1)} = z^{-1}X(z)$$
 (4.2)

and find

$$\mathcal{Z}\{x(n-k)\}\tag{4.3}$$

**Solution:** From (4.1),

$$Z\{x(n-1)\} = \sum_{n=-\infty}^{\infty} x(n-1)z^{-n}$$

$$= \sum_{n=-\infty}^{\infty} x(n)z^{-n-1} = z^{-1} \sum_{n=-\infty}^{\infty} x(n)z^{-n}$$
(4.4)
$$(4.5)$$

resulting in (4.2). Similarly, it can be shown that

$$\mathcal{Z}\{x(n-k)\} = z^{-k}X(z) \tag{4.6}$$

#### 4.2 Find

$$H(z) = \frac{Y(z)}{X(z)} \tag{4.7}$$

from (3.2) assuming that the Z-transform is a linear operation.

**Solution:** Applying (4.6) in (3.2),

$$Y(z) + \frac{1}{2}z^{-1}Y(z) = X(z) + z^{-2}X(z)$$
 (4.8)

$$\implies \frac{Y(z)}{X(z)} = \frac{1 + z^{-2}}{1 + \frac{1}{2}z^{-1}} \tag{4.9}$$

# 4.3 Find the Z transform of

$$\delta(n) = \begin{cases} 1 & n = 0 \\ 0 & \text{otherwise} \end{cases}$$
 (4.10)

and show that the Z-transform of

$$u(n) = \begin{cases} 1 & n \ge 0 \\ 0 & \text{otherwise} \end{cases}$$
 (4.11)

is

$$U(z) = \frac{1}{1 - z^{-1}}, \quad |z| > 1$$
 (4.12)

**Solution:** It is easy to show that

$$\delta(n) \stackrel{\mathcal{Z}}{\rightleftharpoons} 1 \tag{4.13}$$

and from (4.11),

$$U(z) = \sum_{n=0}^{\infty} z^{-n}$$
 (4.14)

$$=\frac{1}{1-z^{-1}}, \quad |z| > 1 \tag{4.15}$$

using the fomula for the sum of an infinite geometric progression.

# 4.4 Show that

$$a^n u(n) \stackrel{\mathcal{Z}}{\rightleftharpoons} \frac{1}{1 - az^{-1}} \quad |z| > |a|$$
 (4.16)

**Solution:** From (4.11), we get,

$$a^{n}u(n) = \begin{cases} a^{n} & n \ge 0\\ 0 & \text{otherwise} \end{cases}$$
 (4.17)

from above,

$$U_a(z) = \sum_{n=0}^{\infty} a^n z^{-n}$$

$$= \sum_{n=0}^{\infty} (az^{-1})^n = \frac{1}{1 - az^{-1}}, \quad |z| > 1$$
(4.18)

using the fomula for the sum of an infinite geometric progression.

#### 4.5 Let

$$H(e^{j\omega}) = H(z = e^{j\omega}).$$
 (4.20)

Plot  $|H(e^{j\omega})|$ . Comment.  $H(e^{j\omega})$  is known as the *Discret Time Fourier Transform* (DTFT) of x(n).

**Solution:** The following code plots Fig. 4.5.

wget https://github.com/HARI-donk-EY/sig pros/blob/main/codes/4/dtft.py

# 5 Impulse Response

5.1 Find an expression for h(n) using H(z), given that

$$h(n) \stackrel{\mathcal{Z}}{\rightleftharpoons} H(z) \tag{5.1}$$

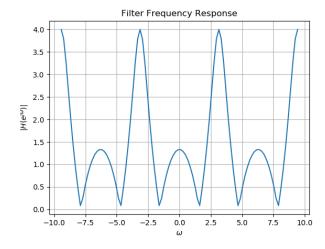

Fig. 4.5:  $|H(e^{J\omega})|$ 

and there is a one to one relationship between h(n) and H(z). h(n) is known as the *impulse response* of the system defined by (3.2).

**Solution:** From (4.9),

$$H(z) = \frac{1}{1 + \frac{1}{2}z^{-1}} + \frac{z^{-2}}{1 + \frac{1}{2}z^{-1}}$$
 (5.2)

$$\implies h(n) = \left(-\frac{1}{2}\right)^n u(n) + \left(-\frac{1}{2}\right)^{n-2} u(n-2)$$
(5.3)

using (4.16) and (4.6).

5.2 Sketch h(n). Is it bounded? Convergent? **Solution:** The following code plots Fig. 5.2.

wget https://raw.githubusercontent.com/ gadepall/EE1310/master/filter/codes/hn.py

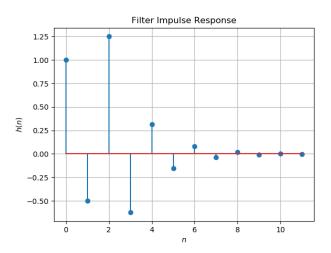

Fig. 5.2: h(n) as the inverse of H(z)
